# Cable and Umbilical Floats

---

Hoses, cables, ropes and umbilicals may need special floats **to be lightened under water**: Resinex offers a complete range of floats with reduced diameters that cannot slip once assembled.

# Cable and Umbilical Floats

The shell is in linear polyethylene while the filling is polyurethane foam or syntactic foam, depending on the depth of application. Resinex has developed particular polyurethane clamps and reducers to maximize the grip on the cable surface.

# Cable and Umbilical Floats

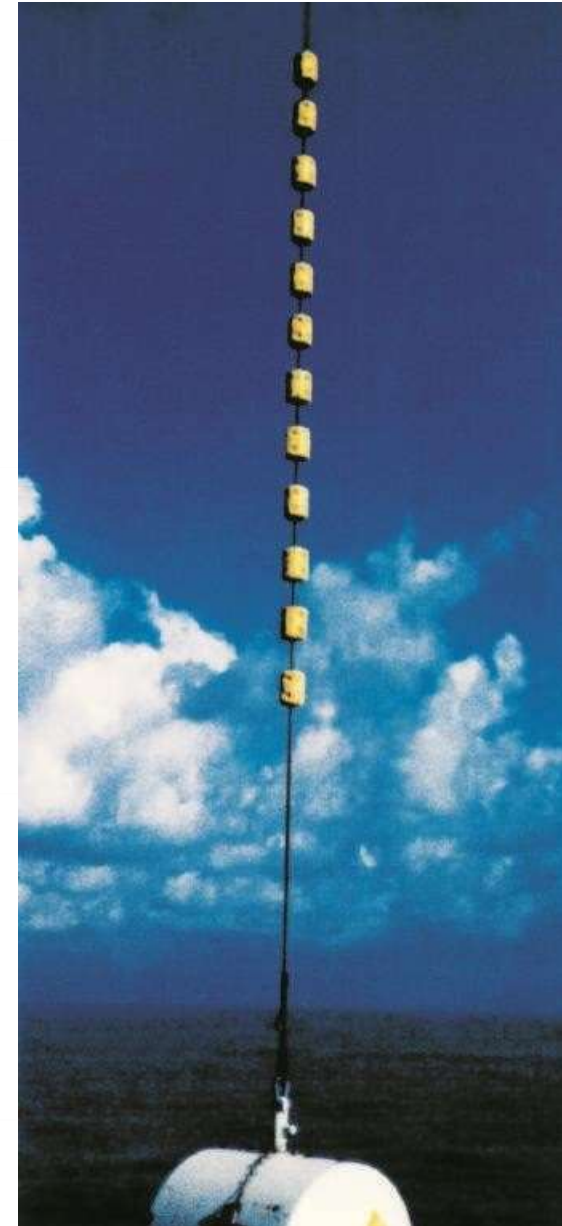

Particular studies have been carried on to give the products the **best mixture between load, weight of material and tightening force**: Resinex guarantees hydrodynamics, the higher tightening force along with the usual high resistance to pressure until 11.000 m of depth.
